AMENDMENTS TO THE ABSTRACT

Please amend the Abstract as follows:

A tire pressure detecting apparatus detects the pressure and location of a tire in a vehicle and notifies a person in the vehicle of each tire pressure and the location of the tire linked with the tire pressure. Terminals ~~(31, 32, 33, 34)~~ are arranged on the tires ~~(21, 22, 23, 24)~~ of the vehicle, respectively. Receivers ~~(41, 42, 43, 44)~~ are arranged in the vicinities of the tires, to receive ~~tirepressuredatasignalstransmittedfromtheterminalsandmeasure~~ tire pressure data signals transmitted from the terminals and measure reception levels of the received signals. An ~~ECU (5)~~ ECU is connected ~~toreceivethetirepressuredataandsignallevelsfromthereceivers.~~ to receive the tire pressure data and signal levels from the receivers. The ECU obtains only one piece of the tire pressure data having a maximum signal level from the receiver showing the maximum signal level and relates the obtained tire pressure data is of the tire with the maximum-signal-level receiver. ~~A display (6)~~ A display displays the pressure and location of each tire determined by the ECU.
